

Bobcat E35z

£POA

The new Bobcat® E35z, a new generation model in the popular 3.5 tonne machine class offers the additional benefits of ZHS design. This excavator provides the best possible mix of compactness, a large operating range for the workgroup (especially with the optional long arm), great stability (two counterweight options available) and a large and comfortable operator area. This machine tops out the R-Series range and will be appreciated by customers with a need for a high specification ZHS model, whilst preferring the lower cost of ownership compared to higher tonnage machines.
